Schroder International Selection Fund Emerging Europe

A Accumulation EUR | Data as at 31.12.2022

Important Information

The fund invests primarily in equity and equity related securities of Central and Eastern European companies.

- The fund invests in equity would subject to equity investment risk.
- The fund may invest in emerging markets and concentrated region which are subject to ownership and custody risks, political and economic risks, market and settlement risks, etc.
- The fund may invest substantially in European securities and may suffer from adverse economic or financial events in Europe.
- The fund may use derivatives to meet its investment objective. Derivatives exposure may involve higher counterparty, liquidity and valuation risks. In adverse situations, the fund may suffer significant losses from their derivative usage for hedging.
- For share classes with a general dividend policy, expenses will be paid out of capital rather than out of gross income. The amount of distributable income therefore increases and the amount so increased may be considered to be dividend paid out of capital. Share classes with a fixed dividend policy may pay out both income and capital in distributions. Where distributions are paid out of capital, this amounts to a return or withdrawal of part of your original investment or capital gains attributable to that and may result in an immediate decrease in the net asset value of shares.

You should not make any investment decision solely based on this document. Please read the relevant offering document carefully for further fund details including risk factors.

Investment Objectives

The Fund aims to provide capital growth in excess of the MSCI Emerging Markets Europe 10/40 (Net TR) index after fees have been deducted over a three to five year period, by investing in equity and equity related securities of Central and Eastern European companies.

Special information

Due to the unprecedented geo-political situation caused by Russia's invasion of the Ukraine and the resultant impact of sanctions and actions of governments and market counterparties on certain Russian issuers and assets, the calculation of the net asset value (NAV) and the issue and redemption of all share classes in the fund was suspended with effect from 25 February 2022 to 18 July 2022. Russian equities and equity related securities held by the fund as of 25 February 2022 were allocated on 18 July 2022 to two newly created share classes (X9 and Y9) within the fund. Shares in these new classes were issued on the same day to each shareholder in the fund on the basis of their percentage holding in the Fund on 25 February 2022. Following that allocation, the fund (through its share classes other than the two newly created classes) has no more exposure to Russian equities and equity related securities and will not make any further investments in Russian securities until further notice. This is consistent with the fund's target benchmark from which all Russian equities have been removed since 9 March 2022.

Past Performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Exchange rate changes may cause the value of any overseas investments to rise or fall. Please note the Special Information section included above when reviewing the past performance of the fund.

Benchmark and corporate action information

Please refer to the Special information section above.

Please note Russia was removed from the target benchmark with effect from 9 March 2022.

The fund's performance should be assessed against its target benchmark being to exceed the MSCI Emerging Markets Europe 10/40 (Net TR) index. The fund's investment universe is expected to overlap materially, directly or indirectly, with the components of the target benchmark. The investment manager invests on a discretionary basis and there are no restrictions on the extent to which the fund's portfolio and performance may deviate from the target benchmark. The investment manager will invest in companies or sectors not included in the target benchmark in order to take advantage of specific investment opportunities. The target benchmark has been selected because it is representative of the type of investments in which the fund is likely to invest and it is, therefore, an appropriate target in relation to the return that the fund aims to provide.
