Financial year end of this sub-fund:	31 December	Dividend policy:	Capitalisation shares – No dividend distribution (income, if any, will be reinvested)
			Distribution shares - Dividend, if declared, will be paid Distributions may be paid out of capital which may result in an immediate reduction of the sub-fund's net asset value per share
		Min. investment:	None
		Min. holding:	"Privilege" categories – EUR 3 million or equivalent

The ongoing charges figure is calculated based on expenses for the year ended at 31 December 2020. This figure may vary from year to year. The ongoing charge is calculated by adding all direct fees, indirect fees and external fees of the sub-fund and then divided by the average net assets. Direct fees refer to charges and payment directly borne by the sub-fund such as operating costs, remuneration and payment to key operators and service providers. Indirect fees refer to the ongoing charges of the underlying funds which the sub-fund invests. External fees refer to any remuneration of the management company or other party that derives from fee-sharing arrangement.

What is this product?

This sub-fund is a fund constituted in the form of a mutual fund. It is incorporated under Luxembourg law and regulated by the Commission de Surveillance du Secteur Financier (CSSF).

BNP Paribas Funds Global Inflation-Linked Bond

Objective and Investment Strategy

Objective

To increase the value of the fund's assets over the medium term, primarily by investing inflation linked bonds.

Strategy

The sub-fund invests at least 2/3 of its assets in bonds indexed to inflation rates and/or securities treated as equivalent that are issued or guaranteed by a member state of the Organisation for Economic Co-operation and Development, denominated in any currencies.

The duration of the sub-fund is actively managed.

The remaining portion, namely a maximum of 1/3 of its assets, may be invested in any other securities, money market instruments or cash, and also, within a limit of 10% of the assets, in collective investment schemes.

After hedging, the sub-fund's exposure to currencies other than EUR may not exceed 25%.

Repurchase transactions, reverse repurchase transactions and similar over-the counter transactions are used for efficient portfolio management up to 100% of the NAV with the aim of raising short term capital in order to enhance the liquidity of the sub-fund.

The Investment Manager applies BNP PARIBAS ASSET MANAGEMENT's Sustainable Investment Policy, which takes into account Environmental, Social and Governance criteria in the investment process of the sub-fund.

The sub-fund may invest in sovereign debt securities but it does not contemplate to invest more than 10% of its net asset value in securities issued by or guaranteed by any single country (including its government, a public or local authority of that country) with a credit rating below investment grade and/or unrated.

Use of Derivatives/Investment in Derivatives

The sub-fund's net derivative exposure may be up to 50% of the sub-fund's NAV.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

Risk in connection with Investments in Inflation-Linked Bonds

- The sub-fund invests in inflation-linked bonds. Compared to traditional fixed-income securities, a lower than expected inflation rate will lead to an underperformance of inflation-linked bonds. The inflation-linked bond market is currently relatively small. If there are major changes on the demand or supply side, this could have a more significant impact than on mature markets. Besides, the value of the assets of the sub-fund may be affected by uncertainties such as fluctuations in foreign exchange rates.

Emerging Market Risk

- The sub-fund may invest in emerging markets (examples of emerging countries include China, India, Indonesia, Korea, Chile, Hungary, Mexico and Poland etc.). Investing in emerging markets is likely to be subject to a higher than average volatility, less liquidity and greater sensitivity than investing in more developed markets due to, among other factors, greater uncertainty, greater political, tax, economic, social, foreign exchange, liquidity and regulatory risks. The price fluctuations of the investments are often amplified in the short term and the value of investments of the sub-fund may go down.

BNP Paribas Funds Global Inflation-Linked Bond

Interest Rate Risk

- The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. An increase in interest rates may result in a decrease in the value of investments in bonds and debt instruments and the value of investments of the sub-fund may go down.

Credit Risk

- The ability of bond issuer to honour its commitments depends on the financial condition of the issuer. An adverse change in the financial condition of the issuer could lower the quality of the bonds, leading to greater price volatility of the bonds. The sub-fund may be subject to the risk that the bond issuer not making payment on interest and principal of the bonds, causing the value of the investment to go down.
- In the event of the default of bond issuer, the sub-fund may experience both delays in liquidating the bonds and losses including a decline in value of the bonds during the period when the sub-fund seeks to enforce its rights.
- Downgrades of a rating of bond issue or issuer may lead to a drop in the value of bonds in which the sub-fund has invested. Such bonds may have less liquidity, making it more difficult to sell and their values may be more volatile.

Counterparty Risk

- This risk is associated with the ability of a counterparty in a financial transaction to fulfil its commitments like payment, delivery and reimbursement. The sub-fund may be exposed to significant losses in the event of a counterparty default.

Risk in connection with Investments in Non-Investment Grade and/or Unrated Debt Securities

- The sub-fund may invest in non-investment grade and/or unrated debt securities. Investing in non-investment grade and/or unrated debt securities may subject the sub-fund to higher credit risk/risk of default than investment grade debt securities. The sub-fund may be exposed to significant losses if the issuers of securities of the sub-fund default payments. The market of non-investment grade and/or unrated debt securities may be less active, making it more difficult to sell the securities. Valuation of such securities is more difficult and thus the sub-fund's price may be more volatile.

Risk in connection with Investments in Sovereign Debt

- The sub-fund may invest in sovereign debt. Investment in sovereign debt issued or guaranteed by governments or governmental entities largely in-debt involves a higher degree of risk. The governmental entity that controls the repayment of sovereign debt may not be able or willing to repay the principal and/or interest when due in accordance with the terms of such debt. The value of investments of the sub-fund may be adversely affected.

Risk related to Investments in Some Countries

- Investments in some countries (China, India, Indonesia, Japan, Saudi Arabia and Thailand) involve risks linked to the restrictions imposed on foreign investors and counterparties, higher market volatility and the risk of lack of liquidity.

Risk relating to repurchase agreements

- In the event of the failure of the counterparty with which collateral has been placed, the sub-fund may suffer loss as there may be delays in recovering collateral placed out or the cash originally received may be less than the collateral placed with the counterparty due to inaccurate pricing of the collateral or market movements.

Risk relating to reverse repurchase agreements

- In the event of the failure of the counterparty with which collateral has been placed, the sub-fund may suffer loss as there may be delays in recovering cash placed out or difficulty in realising the collateral or proceeds from the sale of the collateral may be less than the cash placed with the counterparty due to inaccurate pricing of the collateral or market movements.

BNP Paribas Funds Global Inflation-Linked Bond

Risk associated with investments in financial derivative instruments

- Risk associated with financial derivative instruments include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage element/component of a financial derivative instrument can result in a loss significantly greater than the amount invested in the financial derivative instruments by the sub-fund. Exposure to financial derivative instruments may lead to a high risk of significant loss by the sub-fund.

Liquidity Risk

- Investments made by the sub-fund may become illiquid. It may not be possible to sell or buy these investments quickly enough to prevent or minimize a loss in the sub-fund.

Currency Exchange Risk

- The sub-fund may hold assets denominated in currencies that differ from the base currency, and may be affected by exchange rate fluctuations between the base currency and the other currencies and by changes in exchange rate controls. A depreciation of the denomination currency will lead to a depreciation in the exchange value of the security. When the manager is willing to hedge the currency exchange risk of a transaction, there is no guarantee that such operation will be completely effective and the sub-fund's value may be adversely affected.

Operational & Custody Risk

- Some markets are less regulated than most of the international markets; hence, the services related to custody and liquidation for the sub-fund on such markets could be more risky. In the event of a custodian default, the sub-fund may suffer a delay in recovering its assets, pending the resolution of the relevant default or bankruptcy proceedings.

Risk in connection with Dividend Payment

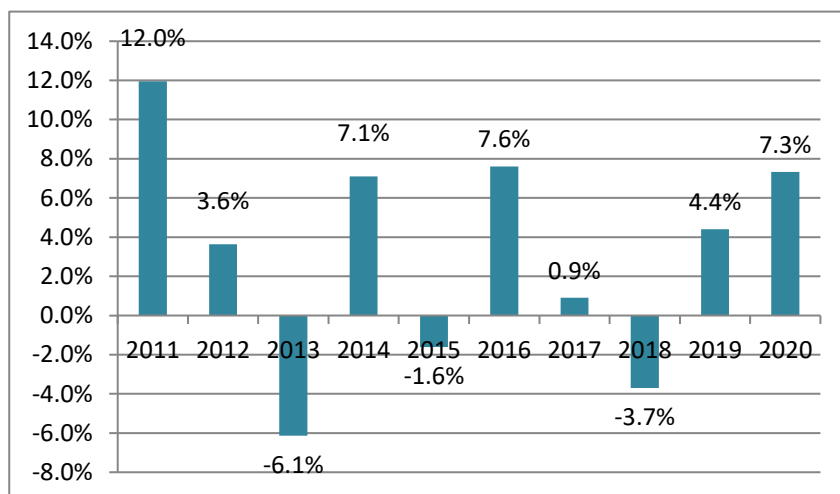

- The Management Company may at its discretion pay dividends out of the capital of the sub-fund. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the sub-fund's capital may result in an immediate reduction of net asset value per share. The Management Company may amend the dividend policy subject to the SFC's prior approval and by giving not less than one month's notice to investors.

Investment Risk

- When investing in a fund, there is a risk that the final outcome may deviate from the initial expectations. The sub-fund's investment portfolio may fall in value and therefore may suffer losses. In addition, there is no guarantee of principal repayment.

BNP Paribas Funds Global Inflation-Linked Bond

How has the fund performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-to-NAV, with dividend reinvested.
- Classic Capitalisation, being a share class with the same reference currency as the sub-fund with the longest track record among all share classes and not restricted to certain types of clients, is selected as the representative share class.
- These figures show by how much the Classic Capitalisation share class increased or decreased in value during the calendar year being shown. Performance data has been calculated in EUR including ongoing charges and excluding subscription fee and redemption fee you might have to pay.
- Where no past performance is shown there was insufficient data available in that year to provide performance.
- BNP Paribas Funds Global Inflation-Linked Bond launch date: 24 July 2006
- Classic Capitalisation share class launch date: 31 July 2006

Is there any guarantee?

This sub-fund does not have any guarantees. You may not get back the full amount of money you invest.
