Minimum investment:	US$5,000 initial, US$1,000 additional for Class A and C Shares US$100,000 initial, US$1,000 additional for Class D Shares

What is this product?

Global Inflation Linked Bond Fund (the "Fund") is a sub-fund of BlackRock Global Funds ("BGF"), an open-ended investment company incorporated in Luxembourg. Its home regulator is the Commission de Surveillance du Secteur Financier (CSSF).

Objectives and Investment Strategy

To maximise real return by investing at least 70% of the Fund's total assets in inflation-linked fixed income securities that are issued globally. The Fund may invest in fixed income securities which are investment grade* or non-investment grade** (up to a limit of 10% of total assets).

It is intended that the maturity of the majority of the fixed income securities held by the Fund will be less than 20 years. However, since the Fund is actively managed, it still has the flexibility to invest in fixed income securities which have a maturity profile outside of the 1 to 20 years range.

The Fund may also invest in emerging markets (such as Brazil, South Africa and South Korea) and "To Be Announced" securities ("TBAs"). TBAs are mortgage-backed securities bought from a mortgage pool for a fixed price at a future date, where the exact security is not known but the main characteristics are specified, and can be either investment grade* or non-investment grade**.

Subject to applicable regulatory restrictions and internal guidelines, the remaining 30% may be invested in financial instruments of companies or issuers of any size in any sector of the economy globally such as debt and other securities consistent with the Fund's objective, subject to the restriction that no more than 10% of the Fund's assets will be invested in equities.

The Fund's expected total maximum investment in debt instruments with loss-absorption features, including but not limited to contingent convertible bonds, will be less than 30% of its net asset value. These instruments may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s).

Derivatives such as government bond futures and interest rate swaps may be used for hedging and mitigating interest rate risk. Foreign exchange forwards and futures may be used to minimize currency exposure. In addition to using derivatives for hedging and risk mitigation, the Fund may use derivatives such as futures, foreign exchange derivatives, swaps and options for investment purposes but it is not limited to a particular strategy regarding the derivatives usage.

The Fund uses Relative "Value at Risk" using Bloomberg Barclays World Government Inflation-Linked 1-20yr Index USD Hedged as the appropriate benchmark to monitor and manage its global exposure.

Certain derivatives used by the Fund may be in respect of asset classes not correlated with the underlying securities positions held by the Fund such as derivatives on currencies.

The proportion of the Fund's net asset value that is expected to be subject to securities lending transactions from time to time ranges from 0% to 40% and will be consistent with the overall investment policy of the Fund.

Use of Derivatives/Investment in Derivatives

The Fund's net derivative exposure may be more than 100% of the Fund's net asset value.

---

* Meaning, at the time of purchase BBB– (Standard & Poor's or equivalent) or better by at least one recognised rating agency or, in the opinion of the Management Company, and, where applicable, based on the Internal Credit Quality Assessment Procedure, are of comparable quality.

** Debt securities which are unrated or rated, at the time of purchase, BB+ (Standard & Poor's or equivalent rating) or lower by at least one recognised rating agency or, in the opinion of the Management Company, and, where applicable, based on the internal credit quality assessment procedure of the Management Company, are of comparable quality.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

1. Investment Risks

The Fund is an investment fund. The Fund's investment portfolio may fall in value due to any of the risk factors below and therefore your investment in the Fund may suffer losses. There is no guarantee of the repayment of principal.

2. Interest Rate Risks

An increase in interest rates may adversely affect the value of the bonds held by the Fund.

3. Credit Risks

The Fund may be exposed to the credit/default risk of bonds that it invests in. In the event of bankruptcy or default of an issuer, the Fund may experience losses and incur costs.

The actual or perceived downgrading of a rated debt security or its issuers could decrease its value and liquidity, and may have an adverse impact on the Fund, however, the Fund may continue to hold it to avoid a distressed sale.

4. Sovereign Debt Risks

Investment in bonds issued or guaranteed by governments or authorities may involve political, economic, default, or other risks, which may in turn have an adverse impact on the Fund. Due to these factors, the sovereign issuers may not be able or willing to repay the principal and/or interest when due.

Holders of defaulting sovereign debt may be requested to participate in the restructuring of such debt. In addition, there may be limited legal recourses available against the sovereign issuer in case of failure of or delay in repayment.

The Fund may have exposure to Eurozone sovereign debts. In light of the fiscal conditions of certain European countries, the Fund may be subject to a number of increased risks arising from a potential crisis in the Eurozone (such as volatility, liquidity, price and currency risks). The performance of the Fund could deteriorate should there be any adverse events in the Eurozone (e.g. downgrade of sovereign credit ratings, default of one or more European countries, or even break-up of the Eurozone).

5. Currency Risks

The Fund may invest in assets denominated in a currency other than the base currency of the Fund. Also, a class of shares may be designated in a currency other than the base currency of the Fund. Changes in exchange rates between such currency and the base currency and changes in exchange rate controls may adversely affect the value of the Fund's assets.

The Investment Adviser may utilise techniques and instruments (e.g. currency overlays) in relation to currencies other than the base currency with the aim of generating positive returns. Any active currency management techniques implemented by the Fund may not be correlated with the underlying securities held by the Fund. As a result, the Fund may suffer significant losses even if there is no loss to the value of the underlying securities held by the Fund.

6. Delayed Delivery Transactions Risks

TBAs may involve counterparty default risk and a risk that the agreed (fixed) price is higher than the prevailing market price at the settlement date. These may have an adverse impact on the value of the Fund.

7. Derivatives Risks

Risks associated with derivatives include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and market risk. The leverage effect of derivatives can result in a loss significantly greater than the amount invested and extensive exposure to derivatives may lead to a significant

loss by the Fund.

The Fund may have a net derivative exposure of more than 100% of its net asset value. This may magnify any potential impact of any negative change in the value of the underlying assets on the Fund and may also increase the volatility of the Fund's price and may lead to significant losses.

Certain derivatives such as derivatives on currencies may be uncorrelated with the underlying securities held by the Fund. In this regard the Fund may suffer significant losses notwithstanding that there may be no loss in respect of the underlying securities positions (predominantly fixed income securities) held by the Fund.

8. Emerging Market Risks

Investment in emerging markets may be subject to a higher than average volatility than more developed markets due to greater political, tax, sustainability related, economic, social, and foreign exchange risks.

The size and trading volume of securities markets in emerging markets may be substantially smaller than developed markets. This may subject the Fund to higher liquidity and volatility risks.

Custody and registration of assets in emerging markets may be less reliable than in developed markets, which may subject the Fund to higher settlement risk.

The Fund may be subject to higher regulatory risks due to low level of regulation, enforcement of regulations and monitoring of investors' activities in emerging markets.

9. Foreign Investments Restrictions Risks

Some countries prohibit or restrict investment, or the repatriation of income, capital or the proceeds from sale of securities. The Fund may incur higher costs investing in these countries. Such restrictions may delay the investment or repatriation of capital of the Fund.

10. Securities Lending Risks

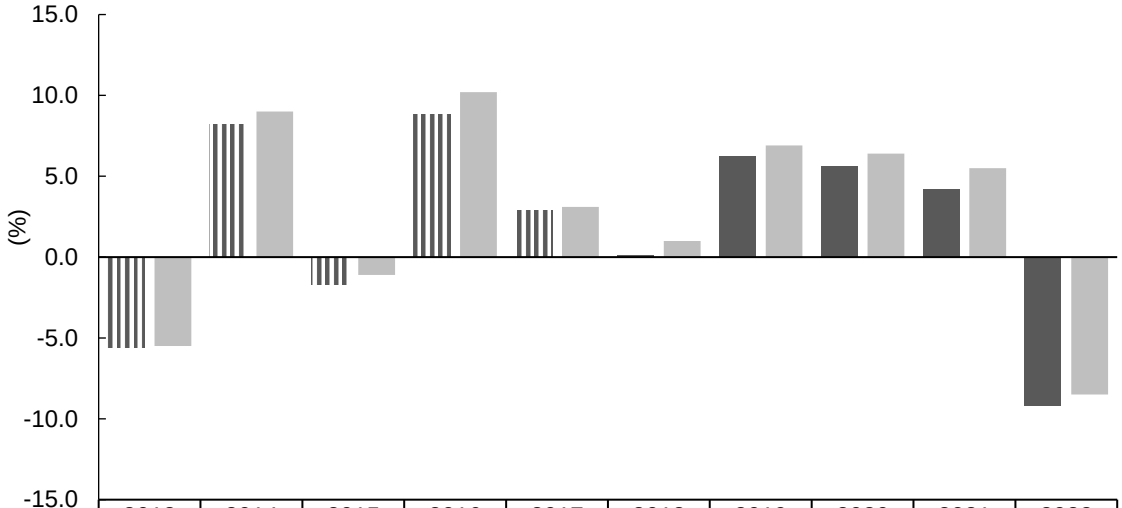

When engaging in securities lending, the Fund will have a credit risk exposure to the counterparties to any securities lending contract. Fund investments can be lent to counterparties over a period of time. A default by the counterparty combined with a fall in the value of the collateral below that of the value of the securities lent may result in a reduction in the value of the Fund.

11. Liquidity Risks

The size and trading volume of securities in the markets relevant to the Fund may be substantially smaller than developed markets. This may lead to investments in such securities becoming less liquid, making it difficult to dispose of them which may reduce the Fund's returns/lead to losses for investors.

How has the fund performed?

Historic performance to 31 December 2022

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Fund	-5.6	8.2	-1.7	8.8	2.9	0.1	6.2	5.6	4.2	-9.2
Benchmark†	-5.5	9.0	-1.1	10.2	3.1	1.0	6.9	6.4	5.5	-8.5

▥ During this period the performance of the Fund was achieved under circumstances that no longer apply. The Fund changed its investment policy in 2017.

Notes:

Past performance information is not indicative of future performance. You may not get back the full amount invested. The computation of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested expressed as a % change. These figures show by how much the share class increased or decreased in value during the calendar year shown. Performance data has been calculated in USD, including ongoing charges and taxes and excluding subscription and redemption fees, if applicable. The past performance information reflects the performance of the A2 base currency share class which the Investment Adviser views as the most appropriate representative share class. Please refer to the website www.blackrock.com/hk for performance information regarding other share classes. This website has not been reviewed by the SFC.

† The benchmark of the Fund is Bloomberg World Government Inflation-Linked 1-20yr Index USD Hedged (formerly known as Bloomberg Barclays World Government Inflation-Linked 1-20yr Index USD Hedged). The performance benchmark information set out above prior to 8 December 2017 is that of the Barclays World Government Inflation-Linked Bond Index. The benchmark was changed on 8 December 2017 as it would be in the best interests of shareholders to adopt the current benchmark as reference benchmark for the calculation of the relative value at risk in order to take advantage of the prevailing inflation rate environment and for better flexibility in achieving the investment objective of the Fund.

Fund launch date: 2009
Share class launch date: 2009

Is there any guarantee?

This Fund does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?

Charges which may be payable by you
