# JPMorgan Multi Income Fund

- The Fund invests in a diversified portfolio of income-producing equities, bonds and other securities. The Fund will primarily invest (at least 70%) in debt and equity securities. The Fund will have limited RMB denominated underlying investments.
- The Fund is therefore exposed to a range of investment related risks which includes risk related to dynamic asset allocation strategy, debt securities (including investment grade bond risks, below investment grade/ unrated invest risk, credit risk, interest rate risk, sovereign debt risk and valuation risk), asset backed securities, mortgage backed securities, collateralised loan obligations and asset backed commercial papers, equity, real estate market (associated with the risk of investing in REITs and other property related securities; direct investment in real estate is not permitted), emerging markets, concentration, currency, derivatives, liquidity, hedging, class currency, currency hedged classes and Eurozone sovereign debt crisis. For RMB hedged class, risks associated with the RMB currency and currency hedged classes risks. RMB is currently not freely convertible and RMB convertibility from offshore RMB (CNH) to onshore RMB (CNY) is a managed currency process subject to foreign exchange control policies of and restrictions imposed by the Chinese government. There can be no assurance that RMB will not be subject to devaluation at some point. The Manager may, under extreme market conditions when there is not sufficient RMB for currency conversion and with the approval of the Trustee, pay redemption monies and/or distributions in USD.
- Where the income generated by the Fund is insufficient to pay a distribution as the Fund declares, the Manager may at its discretion determine such distributions may be paid from capital including realised and unrealised capital gains. Investors should note that the payment of distributions out of capital represents a return or withdrawal of part of the amount they originally invested or from any capital gains attributable to that original investment. Any payments of distributions by the Fund may result in an immediate decrease in the net asset value per unit. Also, a positive distribution yield does not imply a positive return on the total investment.
- Investors may be subject to substantial losses.
- Investors should not solely rely on this document to make any investment decision.

## Fund overview

### Investment objective

To maximize the income return primarily through investing in a diversified portfolio of income producing equities, bonds and other securities. In addition, the Fund aims to provide medium to long term moderate capital growth. The Manager will seek to achieve these objectives by active asset allocation to, and within, different asset classes and geographies. The asset classes include but are not limited to investment grade bonds, below investment grade bonds, high yield bonds, emerging market bonds, convertible bonds, asset backed securities (including asset backed commercial papers), mortgage backed securities, real estate investment trusts ("REITs") and equities.
