	Additional:	Nil	

[#] Since the operating expenses for Share Classes AU, AUP, AQ, AQP and ASH were reduced on 1 February 2018, the ongoing charges figure is an estimate only. The figure is established based on the estimated total asset management fee and operating expenses of the share class and is expressed as a percentage of the average net asset value of the share class over a 12-month period. This figure may vary from year to year.

[§] The ongoing charges figure for Share Class ASC is an estimate as this share class has not launched as of the date of this document. The ongoing charges figure is estimated based on the total of the asset management fee and operating expenses over 12 months and expressed as a percentage of the estimated average net asset value of the share class over the same period. This figure may vary from year to year.

What is this product?

Threadneedle (Lux) – Asia Contrarian Equity (the “Portfolio”) is a portfolio of Threadneedle (Lux), an investment company (i.e. a mutual fund) with variable capital constituted in Luxembourg. The home regulator of Threadneedle (Lux) is the Commission de Surveillance du Secteur Financier in Luxembourg.

Objective and Investment Strategy

The Portfolio seeks to achieve long-term capital appreciation by investing at least two-thirds of its assets in the equity securities of companies listed or domiciled, or exercising the predominant part of their economic activity in the Asia Pacific region (excluding Japan). For the avoidance of doubt, the Portfolio will invest at least two-thirds of its assets in the equity securities of companies listed or domiciled, or exercising the predominant part of their economic activity in Asia (which may include emerging market countries).

The Portfolio may further invest in other securities including real estate investment trusts (“REITs”) that are listed or traded on regulated markets.

The Sub-Advisor will take a contrarian approach to security selection, with an emphasis on stocks that have underperformed the market due to negative sentiment, but which it believes have the potential for recovery.

The Sub-Advisor believes that events, for example in the political or competitor environment, or investor sentiment, may lead to a temporary mispricing of stocks. The Sub-Advisor aims to identify companies whose share prices have been affected by factors such as those mentioned above, so they appear to be undervalued despite having a good long term outlook based on research and fundamental analysis, which considers factors such as the company’s financial circumstances, competitors and management.

Threadneedle (Lux) – Asia Contrarian Equity

The Portfolio will not use financial derivative instruments other than for the purposes of hedging or efficient portfolio management. The Portfolio will not use financial derivative instruments for investment purposes.

The Portfolio does not intend to invest in China A-Shares and China B-Shares either directly or indirectly.

The Sub-Advisor currently does not intend to invest in debt securities, or enter into any securities lending, repurchase/reverse-repurchase transactions or other similar over-the-counter transactions in respect of the Portfolio. Prior approval from the SFC will be sought and at least one month's prior notice will be given to investors if there is any change in such intention.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

Risks relating to the objective and investment strategy of the Portfolio

The Portfolio primarily invests in equity securities in Asia, taking a contrarian investment approach. This carries the following risks:

High Volatility Risk:

- This Portfolio typically carries a risk of high volatility due to its portfolio composition or the portfolio management techniques used. Factors likely to increase the volatility of the Portfolio compared to other funds include its investments in equities, which typically show more fluctuations in their price than other asset types, such as bonds, its investments in emerging market countries, and the contrarian approach taken by the Portfolio. This means that the Portfolio's value is likely to rise and fall more frequently and this could be more pronounced than for other portfolios.
- The value of equity securities is affected by various factors, such as the economic environment and market sentiment. A rise or fall in value of the equity securities affects the price of the Portfolio.
- The investments in the Portfolio are made principally in Asia. This means that the Portfolio has exposure to this market, and will be primarily affected by the rise and fall of equity markets in this region and only to a lesser extent by other global markets.
- Investors should be aware that geographic concentration may add more volatility than a broad-based fund such as a global equity fund.
- The value of the Portfolio may be adversely affected by the above factors and shareholders may suffer losses.

Political and Financial Risk (Emerging Market Risk):

The Portfolio may invest in emerging markets where economic, political and regulatory risk can be significant. Investments in emerging markets may be more volatile and subject to higher liquidity and settlement risks than other investments. These factors, as well as fluctuations in currency, inflation and interest rates, and the ability of the Portfolio to convert foreign currencies, can have an adverse impact on the value of the Portfolio.

Investment Risk:

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- There is no assurance that the Portfolio will achieve its objective.
- The Sub-Advisor's contrarian approach to stock selection means that stocks that have under-performed the market will form part of the Portfolio. There is no guarantee that these stocks will recover and this could have an adverse effect on the value of the Portfolio.
- The Portfolio may invest in REITs. Investors should note that the underlying REITs which the Portfolio invests may not necessarily be authorised by the SFC. In addition, the dividend/payout policy of the Portfolio is not representative of the dividend/payout policy of the underlying REITs. Although it is intended that the REITs the Portfolios invest in will have a similar level of liquidity to those of equities, their underlying real estate investments may be relatively illiquid and this may affect the ability of a REIT to vary its investment portfolio or sell its assets in adverse market conditions or exceptional circumstances. These factors may have an adverse impact on the value of the Portfolios and Shareholders may suffer losses.

Currency Risk (Foreign exchange risks):

- The Portfolio holds investments in multiple currencies. Changes in exchange rates between the currency of the underlying investments of the Portfolio and the Portfolio's base currency may adversely affect the value of the investments of the Portfolio. The returns of your investments may therefore be subject to foreign exchange risks. The returns of your investments may be adversely affected as a result.

Investor Currency Risk:

Where you invest in a share class with a different currency to the Portfolio's base currency, changes in exchange rates between the Portfolio's base currency and the currency of the relevant share class may adversely affect the value of your investments.

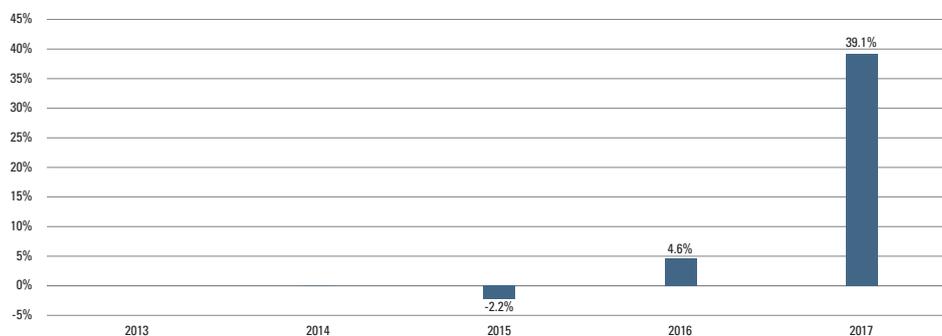

Hedging Risk:

- Derivatives may be used to hedge losses, but they may also offset gains. There is no guarantee that a hedging strategy will work as intended, and a hedging strategy may even unintentionally increase risk.
- The use of financial derivative instruments by the Portfolio for hedging and/or efficient portfolio management purposes may become ineffective in adverse situations or if the Management Company or the Sub-Advisor employs a strategy that does not correlate well with the Portfolio's investments. This may result in a significant loss to the Portfolio.

Distribution out of capital risk:

- Distributions may be paid out of the capital of the Share Classes AUP, AQP and ASC if the net distributable income attributable to these share classes during the relevant period is insufficient to pay distributions as declared. The Directors of the Portfolio may also, at their discretion, pay dividends out of gross income while paying all or part of the share classes' expenses out of their capital, resulting in an increase in distributable income for the payment of dividends, and therefore paying dividends effectively out of capital of the relevant share classes. Investors should note that the payment of distributions out of, or effectively out of, capital represents a return or a withdrawal of part of the amount they originally invested or capital gain attributable to that amount. Any distributions involving payment of dividends out of, or effectively out of, capital of the share classes will result in an immediate decrease in the net asset value per share of the relevant share classes.

How has the Portfolio performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the share class increased or decreased in value during the calendar year being shown. Performance data has been calculated in US\$ including ongoing charges and excluding subscription fee and redemption fee you might have to pay.
- Where no past performance is shown there was insufficient data available in that year to provide performance.
- Portfolio launch date: 14 May 2014.
- Class AU launch date: 14 May 2014.
- The Management Company views Class AU, being the base currency retail share class of the Portfolio, as the most appropriate representative share class.

Is there any guarantee?

This Portfolio does not have any guarantees. You may not get back the full amount of money you invest.

Threadneedle (Lux) – Asia Contrarian Equity

What are the fees and charges?

Charges which may be payable by you

You may have to pay the following fees when dealing in the shares of the Portfolio.

Fee	What you pay
Subscription Fee (Initial Sales Charge)	Share Classes AU, AUP, AQ, AQP, ASC, ASH: Up to 5.00% of the amount invested
Switching Fee (Exchange Fee)	Up to 0.75% of the net asset value of the acquired shares
Redemption Fee	Not applicable

Ongoing fees payable by the Portfolio

The following expenses will be paid out of the Portfolio. They affect you because they reduce the return you get on your investments.

	Annual rate
Asset management fee	Share Classes AU, AUP, AQ, AQP, ASC and ASH: 1.50% of the class's value
Custodian fee	Included in Operating Expenses below
Performance fee	Not applicable
Administration fee	Included in Operating Expenses below
Operating Expenses	0.30% of the class's value

Other fees

You may have to pay other fees when dealing in the shares of the Portfolio.

Additional Information

- In respect of Share Classes AUP, AQP and ASC, the composition of the distributions (i.e. the relative amounts paid out of (i) net distributable income and (ii) capital) for the last 12 months are available by the Hong Kong Representative on request and also on the website www.columbiathreadneedle.com¹.
- You generally buy and redeem shares at the Portfolio's next-determined net asset value after the Registrar and Transfer Agent receives your request in good order on or before 3.00 p.m. (Luxembourg time) on each valuation day being the dealing cut-off time. The Hong Kong Representative/your distributor may impose different deadlines for receiving requests from investors. Please check with your distributor regarding its internal dealing cut-off time.
- The net asset value of this Portfolio is calculated on each Luxembourg "business day" and the price of shares is published daily on the website www.columbiathreadneedle.com¹.
- You may obtain the past performance information of other share classes offered to Hong Kong investors from www.columbiathreadneedle.com¹.
